Detailed Action

Response to Amendment

1. In view of the Appeal Brief filed 8-25-05 is REOPENED. Claims 1-5 are rejected as set forth below. Claim 6-21 are allowed. To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final or,

(2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2). Additionally, ALL of Applicant's arguments in the pending appeal brief are rendered moot in view of the new grounds of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 97/42259 to Chevalier et al as set forth in the previous office action and further in view of US 4940631 to Colin et al and US 5,906,789 to Hausdorf et al.

With respect to claim 1, Chevalier et al teaches that the sponge cloth density can vary from 20 to 100 kg/m³ but fails to teach that the sponge cloth has a density of at least 109.6kg/m³. Colin et al teaches that cellulosic sponges conventionally have densities of between 10 and 150g/l which corresponds to a density of 10-150kg/m³. Additionally, Hausdorf et al teaches that density of a sponge can be adjusted by applying pressure to a mold filled with cellulosic dough (Col 2, lines 65-67), (Col 3, line 1). Since Applicant has not demonstrated that unexpected results are associated with the claimed sponge density and given the overwhelming evidence that selecting the claimed sponge density is a mere matter of engineering choice, it would have been obvious to one of ordinary skill at the time of the invention to have used the claimed sponge cloth weight for the purpose of proving a more durable sponge.

Allowable Subject Matter

4. Claims 6-21 are allowable. The following is a statement of reasons for the indication of allowable subject matter: No prior art was found to each or suggest that NMMO can be used to precipitate the cellulose.
